SIRT5 Mouse Monoclonal Antibody [Clone ID: OTI2F1] – CF503232

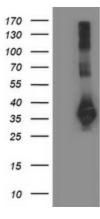

Background:This gene encodes a member of the sirtuin family of proteins, homologs to the yeast Sir2
protein. Members of the sirtuin family are characterized by a sirtuin core domain and
grouped into four classes. The functions of human sirtuins have not yet been determined;
however, yeast sirtuin proteins are known to regulate epigenetic gene silencing and suppress
recombination of rDNA. Studies suggest that the human sirtuins may function as intracellular
regulatory proteins with mono-ADP-ribosyltransferase activity. The protein encoded by this
gene is included in class III of the sirtuin family. Alternative splicing of this gene results in
multiple transcript variants. [provided by RefSeq]

Equivalent amounts of cell lysates (10 ug per lane) of wild-type HeLa cells (WT, Cat# LC810HELA) and SIRT5-Knockout HeLa cells (KO, Cat# [LC830483]) were separated by SDS-PAGE and immunoblotted with anti-SIRT5 monoclonal antibody [TA503232] (1:500). Then the blotted membrane was stripped and reprobed with anti-HSP90 antibody as a loading control.
