

Product datasheet for MR207502L4

Des (NM_010043) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Des (NM_010043) Mouse Tagged Lenti ORF Clone

Tag: mGFP Symbol: Des

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(MR207502).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

ACCN: NM_010043

ORF Size: 1407 bp

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Des (NM_010043) Mouse Tagged Lenti ORF Clone - MR207502L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with

0.22um filter is required.

RefSeq: <u>NM 010043.2</u>, <u>NP 034173.1</u>

 RefSeq Size:
 3065 bp

 RefSeq ORF:
 1410 bp

 Locus ID:
 13346

 UniProt ID:
 P31001

Cytogenetics: 1 38.85 cM

Gene Summary: This gene encodes a muscle-specific class III intermediate filament. Homopolymers of this

protein form a stable intracytoplasmic filamentous network connecting myofibrils to each other and to the plasma membrane and are essential for maintaining the strength and integrity of skeletal, cardiac and smooth muscle fibers. Mutations in this gene affect assembly of intermediate filaments. Mice lacking this gene are able to develop and reproduce but exhibit abnormal muscle fibers. Mutations in the human gene are associated with myofibrillar

myopathy, dilated cardiomyopathy, neurogenic scapuloperoneal syndrome and autosomal

recessive limb-girdle muscular dystrophy, type 2R. [provided by RefSeq, Jan 2014]
