

Product datasheet for MR220642L4

Amn (NM_033603) Mouse Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Amn (NM_033603) Mouse Tagged Lenti ORF Clone

Tag: mGFP Symbol: Amn

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF

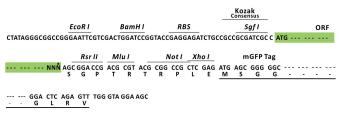

Sequence:

The ORF insert of this clone is exactly the same as(MR220642).

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

* The last codon before the Stop codon of the ORF.

ACCN: NM_033603 **ORF Size:** 1374 bp

Amn (NM_033603) Mouse Tagged Lenti ORF Clone - MR220642L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 033603.2, NP 291081.2</u>

RefSeq Size:1685 bpRefSeq ORF:1377 bpLocus ID:93835

UniProt ID:

Cytogenetics: 12 60.94 cM

Gene Summary: This gene encodes a type I transmembrane protein. The encoded protein is an essential

component of the cubulin receptor complex which is thought to play a role in coordinating

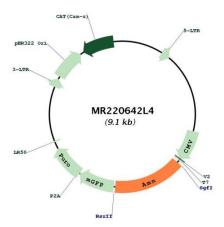

growth and patterning of the embryo. This protein is thought to modulate a bone

morphogenetic protein (BMP) signaling pathway. A homoygous mutation in the mouse gene results in the lack of an amnion in embryos. Mutations in the human gene are associated

with Megaloblastic Anemia-1. [provided by RefSeq, Sep 2015]
