| OTI Disclaimer:  | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:  | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:  | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method:                                       | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>  |
| RefSeq:  | NM 009631.4, NP 033761.2  |
| RefSeq Size:   | 1797 bp   |
| RefSeq ORF:  | 960 bp  |
| Locus ID:  | 11542   |
| Cytogenetics:  | 3 46.45 cM  |
| Gene Summary:  | This gene encodes a protein that belongs to the family of adenosine receptors, which are G-<br>protein-coupled receptors that are involved in a variety of intracellular signaling pathways<br>and physiological functions. The receptor encoded by this gene mediates a sustained<br>cardioprotective function during cardiac ischemia, it is involved in the inhibition of neutrophil<br>degranulation in neutrophil-mediated tissue injury, it has been implicated in both<br>neuroprotective and neurodegenerative effects, and it may also mediate both cell<br>proliferation and cell death. This gene shares its 3' terminal exon with a transcript variant<br>from overlapping GeneID:69296, which encodes an immunoglobulin domain-containing<br>protein. [provided by RefSeq, Nov 2014] |
