# Product datasheet for MR227543L4V

## Dcx (NM\_001110223) Mouse Tagged ORF Clone Lentiviral Particle

## Product data:

| Product Type:                | Lentiviral Particles  |
|------------------------------|---|
| Product Name:                | Dcx (NM_001110223) Mouse Tagged ORF Clone Lentiviral Particle   |
| Symbol:                      | Dcx   |
| Synonyms:                    | Dbct  |
| Mammalian Cell<br>Selection: | Puromycin   |
| Vector:                      | pLenti-C-mGFP-P2A-Puro (PS100093)   |
| Tag:                         | mGFP  |
| ACCN:                        | NM_001110223  |
| ORF Size:                    | 1095 bp   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(MR227543).  |
| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| RefSeq:                      | <u>NM 001110223.1, NP 001103693.1</u>   |
| RefSeq Size:                 | 9000 bp   |
| RefSeq ORF:                  | 1101 bp   |
| Locus ID:                    | 13193   |
| UniProt ID:                  | <u>O88809</u>   |
| Cytogenetics:                | X F2  |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### Dcx (NM\_001110223) Mouse Tagged ORF Clone Lentiviral Particle – MR227543L4V

Gene Summary:

This gene encodes a member of the doublecortin family. The protein encoded by this gene is a cytoplasmic protein and contains two doublecortin domains, which bind microtubules. In the developing cortex, cortical neurons must migrate over long distances to reach the site of their final differentiation. The encoded protein appears to direct neuronal migration by regulating the organization and stability of microtubules. In addition, the encoded protein interacts with LIS1, the regulatory gamma subunit of platelet activating factor acetylhydrolase. Studies in knockout mice lacking this gene and the LIS1 gene suggest that the molecular interaction of these two genes is important in both in neuronal migration and neurogenesis, and there is a cortical role of this gene in nuclear translocation and positioning of the mitotic spindle in radial glial mitotic division. Multiple transcript variants encoding three different isoforms have been found for this gene. [provided by RefSeq, Sep 2010]
