Cyclin H (CCNH) (NM_001239) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Cyclin H (CCNH) (NM_001239) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: Cyclin H

Synonyms: CAK; CycH; p34; p37

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone

Sequence:

The ORF insert of this clone is exactly the same as(RC204982).

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

st The last codon before the Stop codon of the ORF.

ACCN: NM_001239

ORF Size: 969 bp

Cyclin H (CCNH) (NM_001239) Human Tagged Lenti ORF Clone - RC204982L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001239.2</u>

RefSeq Size: 1403 bp RefSeq ORF: 972 bp

Locus ID: 902

UniProt ID: P51946
Cytogenetics: 5q14.3

Domains: CYCLIN, cyclin

Protein Families: Druggable Genome, Transcription Factors

Protein Pathways: Cell cycle, Nucleotide excision repair

MW: 37.6 kDa

Gene Summary: The protein encoded by this gene belongs to the highly conserved cyclin family, whose

members are characterized by a dramatic periodicity in protein abundance through the cell

cycle. Cyclins function as regulators of CDK kinases. Different cyclins exhibit distinct

expression and degradation patterns which contribute to the temporal coordination of each mitotic event. This cyclin forms a complex with CDK7 kinase and ring finger protein MAT1. The kinase complex is able to phosphorylate CDK2 and CDC2 kinases, thus functions as a CDK-activating kinase (CAK). This cyclin and its kinase partner are components of TFIIH, as well as RNA polymerase II protein complexes. They participate in two different transcriptional regulation processes, suggesting an important link between basal transcription control and

the cell cycle machinery. A pseudogene of this gene is found on chromosome 4. Alternate

splicing results in multiple transcript variants.[provided by RefSeq, Nov 2010]
