Product datasheet for RC206870L1V

Cytokeratin 5 (KRT5) (NM_000424) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	Cytokeratin 5 (KRT5) (NM_000424) Human Tagged ORF Clone Lentiviral Particle
Symbol:	Cytokeratin 5
Synonyms:	CK5; DDD; DDD1; EBS2; K5; KRT5A
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
Tag:	Myc-DDK
ACCN:	NM_000424
ORF Size:	1770 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC206870).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 000424.3</u>
RefSeq Size:	2320 bp
RefSeq ORF:	1773 bp
Locus ID:	3852
UniProt ID:	<u>P13647</u>
Cytogenetics:	12q13.13
Domains:	filament
MW:	62.4 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	Cytokeratin 5 (KRT5) (NM_000424) Human Tagged ORF Clone Lentiviral Particle – RC206870L1V
Gene Summary:	The protein encoded by this gene is a member of the keratin gene family. The type II
	cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic

cytokeratins consist of basic or neutral proteins which are arranged in pairs of heterotypic keratin chains coexpressed during differentiation of simple and stratified epithelial tissues. This type II cytokeratin is specifically expressed in the basal layer of the epidermis with family member KRT14. Mutations in these genes have been associated with a complex of diseases termed epidermolysis bullosa simplex. The type II cytokeratins are clustered in a region of chromosome 12q12-q13. [provided by RefSeq, Jul 2008]
