Product datasheet for RC211423L4

NMDAR2C (GRIN2C) (NM_000835) Human Tagged Lenti ORF Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	NMDAR2C (GRIN2C) (NM_000835) Human Tagged Lenti ORF Clone
Tag:	mGFP
Symbol:	NMDAR2C
Synonyms:	GluN2C; NMDAR2C; NR2C
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC211423).
Restriction Sites:	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I ORF Mlu I GCG ATC GC ATG // NNN ACG CGT

ACCN: ORF Size: NM_000835 3699 bp

	DAR2C (GRIN2C) (NM_000835) Human Tagged Lenti ORF Clone – RC211423L4
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Metho	 Dd: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 000835.3</u>
RefSeq Size:	4298 bp
RefSeq ORF:	3702 bp
Locus ID:	2905
UniProt ID:	<u>Q14957</u>
Cytogenetics:	17q25.1
Protein Families:	Druggable Genome, Ion Channels: Glutamate Receptors, Transmembrane
Protein Pathways:	Alzheimer's disease, Amyotrophic lateral sclerosis (ALS), Calcium signaling pathway, Long- term potentiation, Neuroactive ligand-receptor interaction
MW:	134.21 kDa

Serigene NMDAR2C (GRIN2C) (NM_000835) Human Tagged Lenti ORF Clone – RC211423L4

Gene Summary:This gene encodes a subunit of the N-methyl-D-aspartate (NMDA) receptor, which is a
subtype of ionotropic glutamate receptor. NMDA receptors are found in the central nervous
system, are permeable to cations and have an important role in physiological processes such
as learning, memory, and synaptic development. The receptor is a tetramer of different
subunits (typically heterodimer of subunit 1 with one or more of subunits 2A-D), forming a
channel that is permeable to calcium, potassium, and sodium, and whose properties are
determined by subunit composition. Alterations in the subunit composition of the receptor
are associated with pathophysiological conditions such as Parkinson's disease, Alzheimer's
disease, depression, and schizophrenia. Alternative splicing results in multiple transcript
variants. [provided by RefSeq, Jun 2013]
