OriGene Technologies, Inc.

ASD3 (MYH6) (NM_002471) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: ASD3 (MYH6) (NM_002471) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: ASD3

Synonyms: alpha-MHC; ASD3; CMD1EE; CMH14; MYHC; MYHCA; SSS3

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC213673).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_002471

ORF Size: 5817 bp

OTI Disclaimer:

Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at custsupport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>

OTI Annotation:

This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

Components:

Cytogenetics:

The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
- 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: <u>NM 002471.3</u>

 RefSeq Size:
 5941 bp

 RefSeq ORF:
 5820 bp

 Locus ID:
 4624

 UniProt ID:
 P13533

Protein Pathways: Cardiac muscle contraction, Dilated cardiomyopathy, Hypertrophic cardiomyopathy (HCM),

Tight junction, Viral myocarditis

14q11.2

MW: 224.2 kDa

Gene Summary: Cardiac muscle myosin is a hexamer consisting of two heavy chain subunits, two light chain

subunits, and two regulatory subunits. This gene encodes the alpha heavy chain subunit of cardiac myosin. The gene is located approximately 4kb downstream of the gene encoding the

beta heavy chain subunit of cardiac myosin. Mutations in this gene cause familial

hypertrophic cardiomyopathy and atrial septal defect 3. [provided by RefSeq, Feb 2017]
