PKC zeta (PRKCZ) (NM_001033582) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: PKC zeta (PRKCZ) (NM_001033582) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: PKC zeta

Synonyms: PKC-ZETA; PKC2

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC215013).

Sequence:

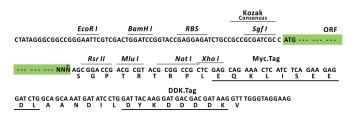

uence: criction Sites: Sgfl-RsrII

Restriction Sites: Cloning Scheme:

Cloning sites used for ORF Shuttling:

Sgf I ORF Rsr II

GCG ATC GC ATG ---//--- NNN AG C GGA CCG ---

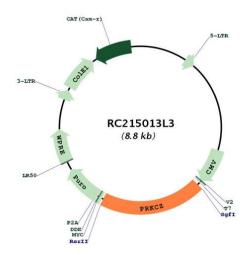

^{*} The last codon before the Stop codon of the ORF.

Plasmid Map:

ACCN: NM_001033582

ORF Size: 1776 bp

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001033582.1, NP 001028754.1</u>

RefSeq Size: 2044 bp RefSeq ORF: 1230 bp

PKC zeta (PRKCZ) (NM_001033582) Human Tagged Lenti ORF Clone - RC215013L3

 Locus ID:
 5590

 UniProt ID:
 Q05513

 Cytogenetics:
 1p36.33

Protein Families: Druggable Genome, Protein Kinase

Protein Pathways: Chemokine signaling pathway, Endocytosis, Insulin signaling pathway, Tight junction, Type II

diabetes mellitus

MW: 67.7 kDa

Gene Summary: Protein kinase C (PKC) zeta is a member of the PKC family of serine/threonine kinases which

are involved in a variety of cellular processes such as proliferation, differentiation and secretion. Unlike the classical PKC isoenzymes which are calcium-dependent, PKC zeta exhibits a kinase activity which is independent of calcium and diacylglycerol but not of phosphatidylserine. Furthermore, it is insensitive to typical PKC inhibitors and cannot be activated by phorbol ester. Unlike the classical PKC isoenzymes, it has only a single zinc finger module. These structural and biochemical properties indicate that the zeta subspecies is related to, but distinct from other isoenzymes of PKC. Alternative splicing results in multiple

transcript variants encoding different isoforms. [provided by RefSeq, Jul 2008]
