

## Product datasheet for **RC216963L4V**

### ABHD12 (NM\_001042472) Human Tagged ORF Clone Lentiviral Particle

#### Product data:

|                           |  |
|---------------------------|--|
| Product Type:             | Lentiviral Particles   |
| Product Name:             | ABHD12 (NM_001042472) Human Tagged ORF Clone Lentiviral Particle   |
| Symbol:                   | ABHD12   |
| Synonyms:                 | ABHD12A; BEM46L2; C20orf22; dj965G21.2; hABHD12; PHARC   |
| Mammalian Cell Selection: | Puromycin  |
| Vector:                   | pLenti-C-mGFP-P2A-Puro (PS100093)  |
| Tag:                      | mGFP   |
| ACCN:                     | NM_001042472   |
| ORF Size:                 | 1194 bp  |
| ORF Nucleotide Sequence:  | The ORF insert of this clone is exactly the same as(RC216963).   |
| OTI Disclaimer:           | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <a href="#">More info</a> |
| OTI Annotation:           | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.   |
| RefSeq:                   | <a href="#">NM_001042472.1</a>   |
| RefSeq Size:              | 1983 bp  |
| RefSeq ORF:               | 1197 bp  |
| Locus ID:                 | 26090  |
| UniProt ID:               | <a href="#">Q8N2K0</a>   |
| Cytogenetics:             | 20p11.21   |
| Protein Families:         | Protease, Transmembrane  |
| MW:                       | 44.9 kDa   |

**Gene Summary:**

This gene encodes an enzyme that catalyzes the hydrolysis of 2-arachidonoyl glycerol (2-AG), the main endocannabinoid lipid transmitter that acts on cannabinoid receptors, CB1 and CB2. The endocannabinoid system is involved in a wide range of physiological processes, including neurotransmission, mood, appetite, pain appreciation, addiction behavior, and inflammation. Mutations in this gene are associated with the neurodegenerative disease, PHARC (polyneuropathy, hearing loss, ataxia, retinitis pigmentosa, and cataract), resulting from an inborn error of endocannabinoid metabolism. Alternatively spliced transcript variants encoding different isoforms have been noted for this gene.[provided by RefSeq, Jan 2011]
