## CD62E (SELE) (NM\_000450) Human Tagged Lenti ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** CD62E (SELE) (NM\_000450) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: CD62E

Synonyms: CD62E; ELAM; ELAM1; ESEL; LECAM2

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC221153).

Sequence:

Restriction Sites: Sgfl-Mlul

**Cloning Scheme:** 

<sup>\*</sup> The last codon before the Stop codon of the ORF

**ACCN:** NM\_000450

ORF Size: 1830 bp

#### CD62E (SELE) (NM\_000450) Human Tagged Lenti ORF Clone - RC221153L4

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 000450.1</u>

 RefSeq Size:
 3834 bp

 RefSeq ORF:
 1833 bp

 Locus ID:
 6401

 UniProt ID:
 P16581

Cytogenetics: 1q24.2

**Domains:** CCP, CLECT, EGF

**Protein Families:** Druggable Genome, Transmembrane

**Protein Pathways:** Cell adhesion molecules (CAMs)

**MW:** 66.66 kDa

**Gene Summary:** The protein encoded by this gene is found in cytokine-stimulated endothelial cells and is

thought to be responsible for the accumulation of blood leukocytes at sites of inflammation by mediating the adhesion of cells to the vascular lining. It exhibits structural features such as the presence of lectin- and EGF-like domains followed by short consensus repeat (SCR) domains that contain 6 conserved cysteine residues. These proteins are part of the selectin

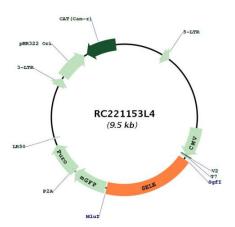

family of cell adhesion molecules. Adhesion molecules participate in the interaction between

leukocytes and the endothelium and appear to be involved in the pathogenesis of

atherosclerosis. [provided by RefSeq, Jul 2008]
