NKCC1 (SLC12A2) (NM_001046) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: NKCC1 (SLC12A2) (NM_001046) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: NKCC1

Synonyms: BSC; BSC2; KILQS; NKCC1; PPP1R141

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

Sgfl-Mlul

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC224053).

Sequence:

e:

Restriction Sites: Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_001046

ORF Size: 3636 bp

OTI Disclaimer:

Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at customport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery.

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info

OTI Annotation:

This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.

Components:

Cytogenetics:

The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
- 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: <u>NM 001046.2</u>

 RefSeq Size:
 6891 bp

 RefSeq ORF:
 3639 bp

 Locus ID:
 6558

 UniProt ID:
 P55011

Protein Families: Druggable Genome, Transmembrane

5q23.3

Protein Pathways: Vibrio cholerae infection

MW: 131.3 kDa

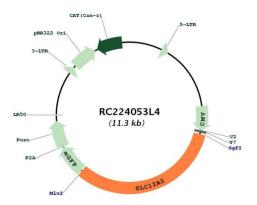

Gene Summary: The protein encoded by this gene mediates sodium and chloride transport and reabsorption.

The encoded protein is a membrane protein and is important in maintaining proper ionic balance and cell volume. This protein is phosphorylated in response to DNA damage. Three transcript variants encoding two different isoforms have been found for this gene. [provided

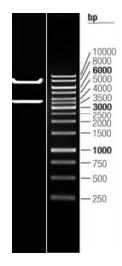

by RefSeq, Jan 2012]
