## VDAC3 (NM\_001135694) Human Tagged Lenti ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

**Product Name:** VDAC3 (NM\_001135694) Human Tagged Lenti ORF Clone

Tag: Myc-DDK Symbol: VDAC3

Synonyms: HD-VDAC3; VDAC-3

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC227390).

Sequence:

. - - -

Sgfl-Mlul

Restriction Sites: Cloning Scheme:

<sup>\*</sup> The last codon before the Stop codon of the ORF.

**ACCN:** NM\_001135694

ORF Size: 852 bp

#### VDAC3 (NM\_001135694) Human Tagged Lenti ORF Clone - RC227390L3

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001135694.2</u>, <u>NP 001129166.1</u>

 RefSeq Size:
 1557 bp

 RefSeq ORF:
 855 bp

 Locus ID:
 7419

 UniProt ID:
 Q9Y277

Cytogenetics: 8p11.21

**Protein Families:** Druggable Genome, Ion Channels: Other

**Protein Pathways:** Calcium signaling pathway, Huntington's disease, Parkinson's disease

MW: 30.8 kDa

**Gene Summary:** This gene encodes a voltage-dependent anion channel (VDAC), and belongs to the

mitochondrial porin family. VDACs are small, integral membrane proteins that traverse the outer mitochondrial membrane and conduct ATP and other small metabolites. They are known to bind several kinases of intermediary metabolism, thought to be involved in translocation of adenine nucleotides, and are hypothesized to form part of the mitochondrial

permeability transition pore, which results in the release of cytochrome c at the onset of apoptotic cell death. Alternatively transcript variants encoding different isoforms have been

described for this gene. [provided by RefSeq, Oct 2011]
