CHRDL1 (NM_001143981) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: CHRDL1 (NM_001143981) Human Untagged Clone

Tag: Tag Free Symbol: CHRDL1

Synonyms: CHL; dA141H5.1; MGC1; MGCN; NRLN1; VOPT

Mammalian Cell

Selection:

Neomycin

Vector:pCMV6-Entry (PS100001)E. coli Selection:Kanamycin (25 ug/mL)

Restriction Sites: Please inquire ACCN: NM 001143981

Insert Size: 1377 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

OTI Annotation: This TrueClone is provided through our Custom Cloning Process that includes sub-cloning

into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: NM 001143981.1, NP 001137453.1

UniProt ID:

CHRDL1 (NM_001143981) Human Untagged Clone - SC325110

RefSeq Size: 4101 bp RefSeq ORF: 1377 bp

Locus ID: 91851

Cytogenetics: Xq23

Protein Families: ES Cell Differentiation/IPS, Secreted Protein

Q9BU40

Gene Summary: This gene encodes an antagonist of bone morphogenetic protein 4. The encoded protein may

play a role in topographic retinotectal projection and in the regulation of retinal angiogenesis in response to hypoxia. Alternatively spliced transcript variants encoding different isoforms

have been described. [provided by RefSeq, Jan 2009]

Transcript Variant: This variant (1) represents the longest transcript and encodes the longest isoform (1). Variants 1 and 5 both encode the same isoform (1). Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the

transcript record were based on transcript alignments.
