

Product datasheet for **SC326022**

APLP2 (NM_001142278) Human Untagged Clone

Product data:

Product Type: Expression Plasmids
Product Name: APLP2 (NM_001142278) Human Untagged Clone
Tag: Tag Free
Symbol: APLP2
Synonyms: APLP-2; APPH; APPL2; CDEBP
Vector: pCMV6 series
Fully Sequenced ORF: >NCBI ORF sequence for NM_001142278, the custom clone sequence may differ by one or more nucleotides

ACCN:	NM_001142278
OTI Disclaimer:	Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
OTI Annotation:	This TrueClone is provided through our Custom Cloning Process that includes sub-cloning into OriGene's pCMV6 vector and full sequencing to provide a non-variant match to the expected reference without frameshifts, and is delivered as lyophilized plasmid DNA.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none"> 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM_001142278.1</u> , <u>NP_001135750.1</u>
RefSeq Size:	3104 bp
RefSeq ORF:	1569 bp
Locus ID:	334
UniProt ID:	<u>Q06481</u>
Cytogenetics:	11q24.3
Protein Families:	Druggable Genome, Transmembrane
Gene Summary:	<p>This gene encodes amyloid precursor- like protein 2 (APLP2), which is a member of the APP (amyloid precursor protein) family including APP, APLP1 and APLP2. This protein is ubiquitously expressed. It contains heparin-, copper- and zinc- binding domains at the N-terminus, BPTI/Kunitz inhibitor and E2 domains in the middle region, and transmembrane and intracellular domains at the C-terminus. This protein interacts with major histocompatibility complex (MHC) class I molecules. The synergy of this protein and the APP is required to mediate neuromuscular transmission, spatial learning and synaptic plasticity. This protein has been implicated in the pathogenesis of Alzheimer's disease. Multiple alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Aug 2011]</p> <p>Transcript Variant: This variant (4) lacks multiple exons in the coding region, compared to variant 1. The reading frame is not affected, and this variant encodes isoform 4 which lacks two internal segments, compared to isoform 1.</p>
