

Product datasheet for SC332933

RTBDN (NM 001270441) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: RTBDN (NM_001270441) Human Untagged Clone

Tag: Tag Free Symbol: RTBDN

Vector: pCMV6-Entry (PS100001)

Fully Sequenced ORF: >SC332933 representing NM_001270441.

Blue=Insert sequence Red=Cloning site Green=Tag(s)

Restriction Sites: Sgfl-Mlul

ACCN: NM 001270441

Insert Size: 720 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Reconstitution Method:

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
- 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeg: NM 001270441.1

 RefSeq Size:
 1042 bp

 RefSeq ORF:
 720 bp

 Locus ID:
 83546

 UniProt ID:
 Q9BSG5

 Cytogenetics:
 19p13.13

Protein Families: Druggable Genome, Secreted Protein

MW: 25.8 kDa

Gene Summary: This gene was first identified in a study of human eye tissues. The protein encoded by this

gene is preferentially expressed in the retina and may play a role in binding retinoids and other carotenoids as it shares homology with riboflavin binding proteins. Alternative splicing results in multiple transcript variants and protein isoforms. [provided by RefSeq, Jul 2012] Transcript Variant: This variant (4) differs in the 5' UTR compared to variant 1. Variants 1, 4, 6 and 7 encode the same isoform (1). Sequence Note: The RefSeq transcript and protein were derived from genomic sequence to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on alignments.
