SAP155 (SF3B1) Rabbit Polyclonal Antibody - TA343787

Background: SF3B1 is subunit 1 of the splicing factor 3b protein complex. Splicing factor 3b, together with

splicing factor 3a and a 12S RNA unit, forms the U2 small nuclear ribonucleoproteins complex (U2 snRNP). The splicing factor 3b/3a complex binds pre-mRNA upstream of the intron's branch site in a sequence independent manner and may anchor the U2 snRNP to the pre-mRNA. Splicing factor 3b is also a component of the minor U12-type spliceosome. The

carboxy-terminal two-thirds of subunit 1 have 22 non-identical, tandem HEAT repeats that

form rod-like, helical structures.
