Background: K10 a type I cytoskeletal keratin. The keratins are intermediate filament proteins responsible

for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. There are two types of cytoskeletal and microfibrillar keratin: type I (acidic; 40-55 kDa) [K9 to K20] and type II (neutral to basic; 56-70 kDa) [K1 to K8]. Both a basic and an acidic

keratin are required for filament assembly.

Synonyms: BCIE; BIE; CK10; EHK; K10; KPP

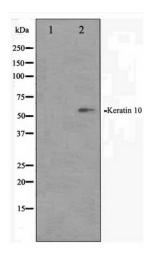

Note:

Keratin 10 antibody detects endogenous levels of total Keratin 10
