CXCR1 Rabbit Monoclonal Antibody [Clone ID: SE2]

Product data:

Product Type: Primary Antibodies

Clone Name: SE2

Applications: FC, IHC, WB

Reactivity: Human

Host: Rabbit

Isotype: IgG, kappa
Clonality: Monoclonal

Immunogen: This antibody was raised by immunizing BALB/c mice with a BSA-conjugated peptide

comprising of the N-terminal part of IL-8RA (amino acids 1-30).

Specificity: SE2 antibody is specific for IL-8RA and does not corss-react with IL-8RB. IL-8RA is a receptor

to interleukin-8, which is a powerful neutrophils chemotactic factor. Binding of IL-8 to the

receptor causes activation of neutrophils.

This antibody is recommended for the detection and analysis of IL-8RA expression. One group used it to identify IL-8RA on the surface of human granulocytes via FACS (Zahn et al., 1997). Importantly, SE2 antibody was specific to IL-8RA-expressing cells only. Subsequent flow cytometric analysis with this antibody led to the characterization of IL-8RA density on human

leukocytes (Zahn et al., 1997).

Formulation: PBS with 0.02% Proclin 300.

Concentration: lot specific

Conjugation: Unconjugated

Storage: Please store at 4°C for up to 3 months. For longer storage, aliquot and store at -20°C. Avoid

freeze and thaw cycles.

Stability: 3 years from dispatch.

Gene Name: C-X-C motif chemokine receptor 1

Database Link: Entrez Gene 3577 Human

P25024

Synonyms: Il8ra

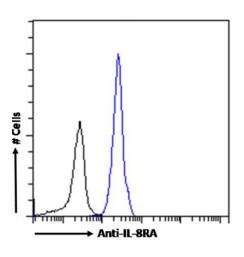

Note:

This chimeric rabbit antibody was made using the variable domain sequences of the original Mouse IgG2b format, for improved compatibility with existing reagents, assays and techniques.

Product images:

Flow cytometry using the Anti-IL-8RA antibody SE2 (TA386404). Paraformaldehyde fixed human peripheral blood monocytes were stained with anti-unknown specificity antibody ([TA385792]; isotype control, black line) or the rabbit IgG version of SE2 (TA386404, blue line) at a dilution of 1:100 for 1h at RT. After washing, the bound antibody was detected using a goat anti-rabbit IgG AlexaFluor® 488 antibody at a dilution of 1:1000 and cells analyzed using a FACSCanto flow-cytometer.

Western Blot using anti-IL-8RA antibody SE2 (TA386404) Human lymph node tissue lysates (35µg protein in RIPA buffer) were resolved on a SDS PAGE gel and blots were probed with the chimeric rabbit version of SE2 (TA386404) at 0.1 µg/ml before detection using an anti-rabbit secondary antibody. A primary incubation of 1h was used and protein was detected by chemiluminescence.
