PTP epsilon (PTPRE) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI5F2] – TA500994AM

Background:The protein encoded by this gene is a member of the protein tyrosine phosphatase (PTP)
family. PTPs are known to be signaling molecules that regulate a variety of cellular processes
including cell growth, differentiation, mitotic cycle, and oncogenic transformation. Two
alternatively spliced transcript variants of this gene have been reported,one of which encodes
a receptor-type PTP that possesses a short extracellular domain, a single transmembrane
region,and two tandem intracytoplasmic catalytic domains; Another one encodes a PTP that
contains a distinct hydrophilic N-terminus, and thus represents a nonreceptor-type isoform
of this PTP. Studies of the similar gene in mice suggested the regulatory roles of this PTP in
RAS related signal transduction pathways, cytokines induced SATA signaling, as well as the
activation of voltage-gated K+ channels.

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PTPRE ([RC207950], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PTPRE. Positive lysates [LY401950] (100ug) and [LC401950] (20ug) can be purchased separately from OriGene.
