#### **GRIGENE** PTP epsilon (PTPRE) Mouse Monoclonal Antibody [Clone ID: OTI5F2] – TA500994S

Background:The protein encoded by this gene is a member of the protein tyrosine phosphatase (PTP)<br/>family. PTPs are known to be signaling molecules that regulate a variety of cellular processes<br/>including cell growth, differentiation, mitotic cycle, and oncogenic transformation. Two<br/>alternatively spliced transcript variants of this gene have been reported, one of which encodes<br/>a receptor-type PTP that possesses a short extracellular domain, a single transmembrane<br/>region, and two tandem intracytoplasmic catalytic domains; Another one encodes a PTP that<br/>contains a distinct hydrophilic N-terminus, and thus represents a nonreceptor-type isoform<br/>of this PTP. Studies of the similar gene in mice suggested the regulatory roles of this PTP in<br/>RAS related signal transduction pathways, cytokines induced SATA signaling, as well as the<br/>activation of voltage-gated K+ channels.

Synonyms: HPTPE; PTPE; R-PTP-EPSILON

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY PTPRE ([RC207950], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PTPRE. Positive lysates [LY401950] (100ug) and [LC401950] (20ug) can be purchased separately from OriGene.
