|                   | MEK1 (MAP2K1) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI1B4] – TA506010BM   |
|-------------------|--|
| Background:       | The protein encoded by this gene is a member of the dual specificity protein kinase family,<br>which acts as a mitogen-activated protein (MAP) kinase kinase. MAP kinases, also known as<br>extracellular signal-regulated kinases (ERKs), act as an integration point for multiple<br>biochemical signals. This protein kinase lies upstream of MAP kinases and stimulates the<br>enzymatic activity of MAP kinases upon wide variety of extra- and intracellular signals. As an<br>essential component of MAP kinase signal transduction pathway, this kinase is involved in<br>many cellular processes such as proliferation, differentiation, transcription regulation and<br>development. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY MAP2K1 ([RC218460], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-MAP2K1. Positive lysates [LY400974] (100ug) and [LC400974] (20ug) can be purchased separately from OriGene.
