Product datasheet for TA506611S

ACTH (POMC) Mouse Monoclonal Antibody [Clone ID: OTI1F3]

Product data:

Product Type:	Primary Antibodies
Clone Name:	OTI1F3
Applications:	IHC, WB
Recommended Dilution:	WB 1:400~4000, IHC 1:150
Reactivity:	Human
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Full length human recombinant protein of human POMC(NP_001030333) produced in HEK293T cell.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol and 0.02% sodium azide.
Concentration:	1 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Gene Name:	proopiomelanocortin
Database Link:	<u>NP_001030333</u> <u>Entrez Gene 5443 Human</u> <u>P01189</u>

CRIGENE ACTH (POMC) Mouse Monoclonal Antibody [Clone ID: OTI1F3] – TA506611S

Background: This gene encodes a polypeptide hormone precursor that undergoes extensive, tissuespecific, post-translational processing via cleavage by subtilisin-like enzymes known as prohormone convertases. There are eight potential cleavage sites within the polypeptide precursor and, depending on tissue type and the available convertases, processing may yield as many as ten biologically active peptides involved in diverse cellular functions. The encoded protein is synthesized mainly in corticotroph cells of the anterior pituitary where four cleavage sites are used; adrenocorticotrophin, essential for normal steroidogenesis and the maintenance of normal adrenal weight, and lipotropin beta are the major end products. In other tissues, including the hypothalamus, placenta, and epithelium, all cleavage sites may be used, giving rise to peptides with roles in pain and energy homeostasis, melanocyte stimulation, and immune modulation. These include several distinct melanotropins, lipotropins, and endorphins that are contained within the adrenocorticotrophin and betalipotropin peptides. Mutations in this gene have been associated with early onset obesity, adrenal insufficiency, and red hair pigmentation. Alternatively spliced transcript variants encoding the same protein have been described. [provided by RefSeq, Jul 2008]

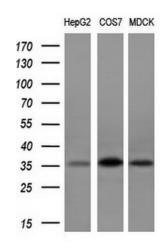

Synonyms:ACTH; CLIP; LPH; MSH; NPP; POCProtein Families:Druggable GenomeProtein Pathways:Adipocytokine signaling pathway, Melanogenesis

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY POMC ([RC215351], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-POMC. Positive lysates [LY422129] (100ug) and [LC422129] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (10ug) from 3 different cell lines by using anti-POMC monoclonal antibody (1:200).

Immunohistochemical staining of paraffinembedded Adenocarcinoma of Human ovary tissue using anti-POMC mouse monoclonal antibody. (Heat-induced epitope retrieval by 10mM citric buffer, pH6.0, 120°C for 3min, [TA506611])

Immunohistochemical staining of paraffinembedded Human pancreas tissue within the normal limits using anti-POMC mouse monoclonal antibody. (Heat-induced epitope retrieval by 10mM citric buffer, pH6.0, 120°C for 3min, [TA506611])
