|                   | CD99 Mouse Monoclonal Antibody [Clone ID: OTI1A4] – TA800820S   |
|-------------------|---|
| Background:       | The protein encoded by this gene is a cell surface glycoprotein involved in leukocyte migration, T-cell adhesion, ganglioside GM1 and transmembrane protein transport, and T-cell death by a caspase-independent pathway. In addition, the encoded protein may have the ability to rearrange the actin cytoskeleton and may also act as an oncosuppressor in osteosarcoma. Cyclophilin A binds to CD99 and may act as a signaling regulator of CD99. This gene is found in the pseudoautosomal region of chromosomes X and Y and escapes X-chromosome inactivation. Two transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008] |
| Synonyms:         | HBA71; MIC2; MIC2X; MIC2Y; MSK5X  |
| Protein Families: | Druggable Genome, Transmembrane   |
| Protein Pathway   | s: Cell adhesion molecules (CAMs), Leukocyte transendothelial migration   |

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CD99 ([RC204056], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CD99. Positive lysates [LY400863] (100ug) and [LC400863] (20ug) can be purchased separately from OriGene.

Western blot analysis of A549 cell lysate (35ug) by using anti-CD99 monoclonal antibody. Dilution: 1:500
