### Cytokeratin 19 (KRT19) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI8D1] – TA804618AM

# Background:The protein encoded by this gene is a member of the keratin family. The keratins are<br/>intermediate filament proteins responsible for the structural integrity of epithelial cells and<br/>are subdivided into cytokeratins and hair keratins. The type I cytokeratins consist of acidic<br/>proteins which are arranged in pairs of heterotypic keratin chains. Unlike its related family<br/>members, this smallest known acidic cytokeratin is not paired with a basic cytokeratin in<br/>epithelial cells. It is specifically expressed in the periderm, the transiently superficial layer that<br/>envelopes the developing epidermis. The type I cytokeratins are clustered in a region of<br/>chromosome 17q12-q21. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY KRT19 ([RC209707], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-KRT19. Positive lysates [LY419428] (100ug) and [LC419428] (20ug) can be purchased separately from OriGene.
