	SGK196 (POMK) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI2B10] – TA804622AM
Background:	This gene encodes a protein that may be involved in the presentation of the laminin-binding O-linked carbohydrate chain of alpha-dystroglycan (a-DG), which forms transmembrane linkages between the extracellular matrix and the exoskeleton. Some pathogens use this O- linked carbohydrate unit for host entry. Loss of function compound heterozygous mutations in this gene were found in a human patient affected by the Walker-Warburg syndrome (WWS) phenotype. Mice lacking this gene contain misplaced neurons (heterotopia) in some regions of the brain, possibly from defects in neuronal migration. Alternative splicing of this gene results in multiple transcript variants. [provided by RefSeq, May 2013]
Synonyms:	MDDGA12; MDDGC12; SGK196
Protein Families	S: Druggable Genome, Protein Kinase, Transmembrane

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SGK196 ([RC222797], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SGK196. Positive lysates [LY410261] (100ug) and [LC410261] (20ug) can be purchased separately from OriGene.
