Background:	The protein encoded by this gene is a member of the NR1 subfamily of nuclear hormone receptors. It is a DNA-binding protein that can bind as a monomer or as a homodimer to hormone response elements upstream of several genes to enhance the expression of those genes. The encoded protein has been shown to interact with NM23-2, a nucleoside diphosphate kinase involved in organogenesis and differentiation, and to help regulate the expression of some genes involved in circadian rhythm. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY RORB ([RC208666], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-RORB. Positive lysates [LY402058] (100ug) and [LC402058] (20ug) can be purchased separately from OriGene.
