### SNP (NPPB) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI7A8] – TA809080BM

# Background: This gene is a member of the natriuretic peptide family and encodes a secreted protein which functions as a cardiac hormone. The protein undergoes two cleavage events, one within the cell and a second after secretion into the blood. The protein's biological actions include natriuresis, diuresis, vasorelaxation, inhibition of renin and aldosterone secretion, and a key role in cardiovascular homeostasis. A high concentration of this protein in the bloodstream is indicative of heart failure. Mutations in this gene have been associated with postmenopausal osteoporosis. [provided by RefSeq, Jul 2008]

Synonyms: BNP; Iso-ANP

Protein Families: Druggable Genome, Secreted Protein, Stem cell - Pluripotency

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY NPPB ([RC206590], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-NPPB (1:2000). Positive lysates [LY400900] (100ug) and [LC400900] (20ug) can be purchased separately from OriGene.
