	Cathepsin L (CTSL) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI8H2] – TA809468BM
Background:	The protein encoded by this gene is a lysosomal cysteine proteinase that plays a major role in intracellular protein catabolism. Its substrates include collagen and elastin, as well as alpha-1 protease inhibitor, a major controlling element of neutrophil elastase activity. The encoded protein has been implicated in several pathologic processes, including myofibril necrosis in myopathies and in myocardial ischemia, and in the renal tubular response to proteinuria. This protein, which is a member of the peptidase C1 family, is a dimer composed of disulfide-linked heavy and light chains, both produced from a single protein precursor. Multiple alternatively spliced transcript variants have been found for this gene. [provided by RefSeq, Apr 2012]
Synonyms:	CATL; CTSL1; MEP
Protein Families:	Druggable Genome, Protease
Protein Pathway	s: Antigen processing and presentation, Lysosome

Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CTSL1 ([RC203143], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CTSL1 (1:2000). Positive lysates [LY400711] (100ug) and [LC400711] (20ug) can be purchased separately from OriGene.
