PAR2 (F2RL1) Human shRNA Lentiviral Particle (Locus ID 2150)

Product data:

Product Type: shRNA Lentiviral Particles

Product Name: PAR2 (F2RL1) Human shRNA Lentiviral Particle (Locus ID 2150)

Locus ID: 2150

Synonyms: GPR11; PAR2

Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: F2RL1 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble

control), 0.5 ml each, >10^7 TU/ml.

RefSeq: NM 005242, NM 005242.1, NM 005242.2, NM 005242.3, NM 005242.4, NM 005242.5,

BC018130, BC018130.1, BC012453, NM 005242.6

UniProt ID: P55085

Summary: This gene encodes a member of the G-protein coupled receptor 1 family of proteins. The

encoded cell surface receptor is activated through proteolytic cleavage of its extracellular amino terminus, resulting in a new amino terminus that acts as a tethered ligand that binds to an extracellular loop domain. Activation of the receptor has been shown to stimulate vascular smooth muscle relaxation, dilate blood vessels, increase blood flow, and lower blood pressure. This protein is also important in the inflammatory response, as well as innate and

adaptive immunity. [provided by RefSeq, Jun 2016]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

PAR2 (F2RL1) Human shRNA Lentiviral Particle (Locus ID 2150) - TL313118V

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
