

Product datasheet for **TL320269V**

AXL Human shRNA Lentiviral Particle (Locus ID 558)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	AXL Human shRNA Lentiviral Particle (Locus ID 558)
Locus ID:	558
Synonyms:	ARK; JTK11; Tyro7; UFO
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	AXL - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001278599 , NM_001699 , NM_021913 , NM_021913.1 , NM_021913.2 , NM_021913.3 , NM_021913.4 , NM_001699.1 , NM_001699.2 , NM_001699.3 , NM_001699.4 , NM_001699.5 , NM_001278599.1 , BC032229 , BC032229.1 , NM_001699.6 , NM_021913.5
UniProt ID:	P30530
Summary:	The protein encoded by this gene is a member of the Tyro3-Axl-Mer (TAM) receptor tyrosine kinase subfamily. The encoded protein possesses an extracellular domain which is composed of two immunoglobulin-like motifs at the N-terminal, followed by two fibronectin type-III motifs. It transduces signals from the extracellular matrix into the cytoplasm by binding to the vitamin K-dependent protein growth arrest-specific 6 (Gas6). This gene may be involved in several cellular functions including growth, migration, aggregation and anti-inflammation in multiple cell types. Alternative splicing results in multiple transcript variants of this gene. [provided by RefSeq, Jul 2013]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
