Macrophage Scavenger Receptor I (MSR1) (NM_002445) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Recombinant protein of human macrophage scavenger receptor 1 (MSR1), transcript variant SR-

All, 1 mg

Species: Human Expression Host: HEK293T

Expression cDNA Clone >RC212931 representing NM_002445 or AA Sequence: Red=Cloning site Green=Tags(s)

DHIRAGPS

TRTRPLEQKLISEEDLAANDILDYKDDDDKV

Tag: C-Myc/DDK
Predicted MW: 39.4 kDa

Concentration: >0.05 μg/μL as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: 25 mM Tris-HCl, 100 mM glycine, pH 7.3, 10% glycerol

Preparation: Recombinant protein was captured through anti-DDK affinity column followed by conventional

chromatography steps.

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and handling

conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 002436

Macrophage Scavenger Receptor I (MSR1) (NM_002445) Human Recombinant Protein – TP312931L

Locus ID: 4481

UniProt ID: P21757
RefSeq Size: 2823
Cytogenetics: 8p22
RefSeq ORF: 1074

Synonyms: CD204; phSR1; phSR2; SCARA1; SR-A; SR-AI; SR-AII; SR-AIII; SRA

Summary: This gene encodes the class A macrophage scavenger receptors, which include three different

types (1, 2, 3) generated by alternative splicing of this gene. These receptors or isoforms are macrophage-specific trimeric integral membrane glycoproteins and have been implicated in

many macrophage-associated physiological and pathological processes including

atherosclerosis, Alzheimer's disease, and host defense. The isoforms type 1 and type 2 are $\,$

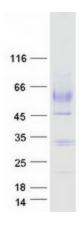

functional receptors and are able to mediate the endocytosis of modified low density lipoproteins (LDLs). The isoform type 3 does not internalize modified LDL (acetyl-LDL) despite having the domain shown to mediate this function in the types 1 and 2 isoforms. It has an altered intracellular processing and is trapped within the endoplasmic reticulum, making it unable to perform endocytosis. The isoform type 3 can inhibit the function of isoforms type 1

and type 2 when co-expressed, indicating a dominant negative effect and suggesting a mechanism for regulation of scavenger receptor activity in macrophages. [provided by RefSeq,

Jul 2008]

Protein Families: Druggable Genome, Transmembrane

Product images:

Coomassie blue staining of purified MSR1 protein (Cat# [TP312931]). The protein was produced from HEK293T cells transfected with MSR1 cDNA clone (Cat# [RC212931]) using MegaTran 2.0 (Cat# [TT210002]).
