| Summary:      | The protein encoded by this gene is an enzyme involved in the biosynthesis of diphthamide, a<br>modified histidine found only in elongation factor-2 (EEF2). Diphthamide residues in EEF2 are<br>targeted for ADP-ribosylation by diphtheria toxin and Pseudomonas exotoxin A. Defects in this<br>gene have been associated with both ovarian cancer and autosomal recessive intellectual<br>disability with short stature, craniofacial, and ectodermal anomalies.
