CD1 (CD1A) (NM_001763) Human Recombinant Protein

Product data:

Product Type: Recombinant Proteins

Description: Purified Recombinant protein of Human CD1a molecule (CD1A), with C-terminal Fc tag,

expressed in human cells, 20 µg

Species: Human
Expression Host: HEK293T

Expression cDNA Clone

or AA Sequence:

A DNA sequence from TrueORF clone, RC221599, encoding the region (Asp17– Val300) of

human CD1A

Tag: C-Fc

Predicted MW: 57 kDa

Concentration: >0.05 μg/μL as determined by microplate BCA method

Purity: > 80% as determined by SDS-PAGE and Coomassie blue staining

Buffer: PBS, pH 7.4, 10% glycerol

Note: For testing in cell culture applications, please filter before use. Note that you may experience

some loss of protein during the filtration process.

Storage: Store at -80°C.

Stability: Stable for 12 months from the date of receipt of the product under proper storage and

handling conditions. Avoid repeated freeze-thaw cycles.

RefSeq: NP 001754

Locus ID: 909

UniProt ID: P06126

RefSeq Size: 2072

Cytogenetics: 1q23.1

RefSeq ORF: 981

Synonyms: CD1; FCB6; HTA1; R4; T6

Summary:

This gene encodes a member of the CD1 family of transmembrane glycoproteins, which are structurally related to the major histocompatibility complex (MHC) proteins and form heterodimers with beta-2-microglobulin. The CD1 proteins mediate the presentation of primarily lipid and glycolipid antigens of self or microbial origin to T cells. The human genome contains five CD1 family genes organized in a cluster on chromosome 1. The CD1 family members are thought to differ in their cellular localization and specificity for particular lipid ligands. The protein encoded by this gene localizes to the plasma membrane and to recycling vesicles of the early endocytic system. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Mar 2016]

Protein Families: Druggable Genome, Transmembrane

Protein Pathways: Hematopoietic cell lineage
