

# **Product datasheet for TP710032**

# Her2 (ERBB2) (NM\_004448) Human Recombinant Protein

## **Product data:**

Product Type:	Recombinant Proteins	
Description:	Recombinant protein of human v-erb-b2 erythroblastic leukemia viral oncogene homolog 2, neuro/glioblastoma derived oncogene homolog (avian) (ERBB2), full length, with C-terminal DDK tag, expressed in sf9 cells.	
Species:	Human	
Expression Host:	Sf9	
Expression cDNA Clone or AA Sequence:	A DNA sequence from TrueORF clone, RC212583, encoding human full-length ERBB2	
Tag:	C-DDK	
Predicted MW:	138 kDa	
Concentration:	>0.05 µg/µL as determined by microplate BCA method	
Purity:	> 80% as determined by SDS-PAGE and Coomassie blue staining	
Buffer:	50 mM Tris-HCl, 100 mM glycine, pH 8.0, 10% glycerol	
Note:	For testing in cell culture applications, please filter before use. Note that you may experience some loss of protein during the filtration process.	
Storage:	Store at -80°C.	
Stability:	Stable for 12 months from the date of receipt of the product under proper storage and handling conditions. Avoid repeated freeze-thaw cycles.	
RefSeq:	<u>NP 004439</u>	
Locus ID:	2064	
UniProt ID:	<u>P04626, X5DNK3</u>	
RefSeq Size:	4624	
Cytogenetics:	17q12	
RefSeq ORF:	3765	
Synonyms:	CD340; HER-2; HER-2/neu; HER2; MLN 19; NEU; NGL; TKR1

### Serigene Her2 (ERBB2) (NM\_004448) Human Recombinant Protein – TP710032

Summary: This gene encodes a member of the epidermal growth factor (EGF) receptor family of receptor tyrosine kinases. This protein has no ligand binding domain of its own and therefore cannot bind growth factors. However, it does bind tightly to other ligand-bound EGF receptor family members to form a heterodimer, stabilizing ligand binding and enhancing kinase-mediated activation of downstream signalling pathways, such as those involving mitogen-activated protein kinase and phosphatidylinositol-3 kinase. Allelic variations at amino acid positions 654 and 655 of isoform a (positions 624 and 625 of isoform b) have been reported, with the most common allele, lle654/lle655, shown here. Amplification and/or overexpression of this gene has been reported in numerous cancers, including breast and ovarian tumors. Alternative splicing results in several additional transcript variants, some encoding different isoforms and others that have not been fully characterized. [provided by RefSeq, Jul 2008]

#### Protein Families: Druggable Genome, Protein Kinase, Transmembrane

Protein Pathways:Adherens junction, Bladder cancer, Calcium signaling pathway, Endometrial cancer, ErbB<br/>signaling pathway, Focal adhesion, Non-small cell lung cancer, Pancreatic cancer, Pathways in<br/>cancer, Prostate cancer
