HLADQA1 (HLA-DQA1) Human shRNA Plasmid Kit (Locus ID 3117)

Product data:

Product Type: shRNA Plasmids

Product Name: HLADQA1 (HLA-DQA1) Human shRNA Plasmid Kit (Locus ID 3117)

Locus ID: 3117

Synonyms: CELIAC1; DQ-A1; DQA1; HLA-DQA

Vector: pRS (TR20003)

E. coli Selection: Ampicillin

Mammalian Cell Puromycin

Selection:

Format:

Retroviral plasmids

Components: HLA-DQA1 - Human, 4 unique 29mer shRNA constructs in retroviral untagged vector(Gene ID

= 3117). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pRS Vector, TR30012, included for free.

RefSeq: NM 002122, NM 002122.1, NM 002122.2, NM 002122.3, BC073977, BC073977.1, BC008585,

BC051832, BC125044, BC125045, BC157865, BC171877

UniProt ID: P01909

Summary: HLA-DQA1 belongs to the HLA class II alpha chain paralogues. The class II molecule is a

heterodimer consisting of an alpha (DQA) and a beta chain (DQB), both anchored in the membrane. It plays a central role in the immune system by presenting peptides derived from extracellular proteins. Class II molecules are expressed in antigen presenting cells (APC: B Lymphocytes, dendritic cells, macrophages). The alpha chain is approximately 33-35 kDa. It is encoded by 5 exons; exon 1 encodes the leader peptide, exons 2 and 3 encode the two

tail. Within the DQ molecule both the alpha chain and the beta chain contain the

polymorphisms specifying the peptide binding specificities, resulting in up to four different

extracellular domains, and exon 4 encodes the transmembrane domain and the cytoplasmic

molecules. Typing for these polymorphisms is routinely done for bone marrow

transplantation. [provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
