**Background:** The protein encoded by this gene interacts with the Von Hippel-Lindau protein to form an intracellular complex. Because it functions as a chaperone protein, it is suspected that it may play a role in the transport of the Von Hippel-Lindau protein from the perinuclear granules to the nucleus or cytoplasm. **Synonyms:** HIBBJ46; PFD3; PFDN3; VBP-1

**Protein Families:** Druggable Genome
